

NANO LASERPEEL™

The fast and easy path to growing your resurfacing business...

Now you can offer patients the newest advancements in facial peels: The NanoLaserPeel, only from Sciton. Available on the Sciton Contour Tunable Resurfacing Laser (TRL™), the NanoLaserPeel gives you precise control for ablation from 4 to 10 microns deep, so it's a great patient introduction to the benefits of laser therapy. The NanoLaserPeel is so easy for the patient, with minimal social downtime and enticing outcomes; it will quickly have patients asking what else can be achieved with deeper peels. Patients love the results because it gives them luminous, velvety soft skin without the time, effort, and harshness of chemical peels or microderm abrasion.

Benefits

Exceptional Results

THE FAST EASY WAY TO CONVERT PATIENTS TO LASER PROCEDURES

- NanoLaserPeel is a perfect introduction to laser procedures for any patient interested in the newest way to get smoother, brighter skin
- Fast, affordable treatment makes NanoLaserPeel an ideal add-on to complement a facial injectable or Sciton BBL™ (BroadBand Light) treatment
- Experienced facial injectable users are always looking for “the next new thing” —and this is it!
- Encourage patients to maximize the results of their injectable procedures with luminous, younger-looking skin
- Bundling opportunities let you encourage or reward patients with an extra treatment at an affordable price

OUTCOMES THAT DELIGHT, VISIT AFTER VISIT

- Precise, uniform ablation that can not be matched by chemical peels or microdermabrasion
- Dramatic improvements in skin smoothness and light reflection
- A difference patients will see and feel
- Fast treatment: You can complete a full face NanoLaserPeel in minutes!
- Only 1-2 days of patient downtime
- No staff set up—time to see and spend with more patients
